

Pre-Registration: Visa Status and Psychological Distress Among Temporary Migrants in the United States

[TBA]

AsPredicted Pre-Registration

1. Have any data been collected for this study?

Yes. Data collection is complete

2. What's the main question being asked or hypothesis being tested in this study?

(RQ1) How is psychological distress expressed among temporary visa holders, and do patterns of expression differ across visa category, gender, and household position? (RQ2) What conditions do participants themselves link to distress, and do these attributions differ across visa category, gender, household position, and other features of their circumstances?

3. Dependent variable

(a) *distress salience*; (b) *condition salience*; (c) *attribution* These will be joined at the person level to variables already recorded in the study tracker: gender, visa status, age, country of origin, educational attainment, university, major/field, employment status (org type/industry, company or institution name, job title), city/state, parent status, couple number (links spouse pairs recruited together), interview date, interview length (minutes), and interviewer.

4. Conditions

Not applicable. Comparisons are across naturally occurring groups.

5. Analyses

- (1) Primary: distress salience profiles by visa status, gender, and household position etc..
- (2) Secondary: latent class analysis on 6–9 distress indicators, with covariates drawn from the tracker (visa status, gender, age, country of origin collapsed to region, educational attainment, employment status, household position).
- (3) Attribution analysis: condition-by-distress co-occurrence heatmap, small multiples by visa status, elicited vs. volunteered reported separately.
- (4) Qualitative excerpts organized by condition.

6. Outliers and Exclusions

Any visa status, country-of-origin/region, or other demographic cell below 10 participants is collapsed per rules fixed before analysis.

7. Sample Size

$N = 195$ completed interview transcripts, fixed by already-completed data collection; no further interviews will be conducted.

8. Other

N/A

9. Name

Visa Status and Psychological Distress Among Temporary Migrants: Coding and Analysis Plan for Interview Data

10. Type of study

Observational/archival study

11. Data source

Other—original semi-structured interviews conducted directly by the research team
